

CertCentral® Managed Automation

Hands-free automation of certificate provisioning and renewal

Overview

CertCentral® Managed Automation is a service that delivers hands-free certificate enrollment, installation, and renewal, streamlining management of the certificate lifecycle and reducing the risk of business disruption caused by certificate expirations or human error.

CertCentral® Managed Automation's rich feature set gives TLS and security administrators fine-grained control over certificate automation and is delivered through a self-governing infrastructure that minimizes maintenance and ensures integrity of operations.

Automated certificate provisioning with CertCentral® Managed Automation

Reduce administrative overhead and risk of business disruption

Reduce overhead of managing certificate installation and renewals, with automated CSR generation, certificate issuance, installation, and verification that can be triggered by a user or scheduled.

Reduce risk of business disruption from outages caused by certificate expirations or human error.

Improve security posture with centralized visibility and management that improves adherence to corporate policy and reduces rogue certificate issuance.

Automate processes with centralized management and fine-grained control

Profiles that govern what certificate types can be automated

Scheduling that restricts automation events to designated maintenance windows

Autorenewals that trigger hands-free renewal processes

Bulk actions for issuance of policy changes or certificate reissuance in bulk

Approval workflows for automated routing

Alerts for notification of actionable events

Reporting with detailed view of automation event activity

A self-governing infrastructure

CertCentral® Managed Automation is delivered through sensors and agents that are self-governing, reducing the IT overhead of maintaining infrastructure. Sensors and agents continuously ping CertCentral for new automation event requests, automatically update new versions, and deliver notification alerts on disruption in function.

Supported platforms

Web Servers: Apache HTTP Server, Apache Tomcat, NGINX, IBM HTTP Server, Microsoft IIS

Load Balancers: F5, Citrix NetScaler, A10, AWS Application Load Balancer, AWS Network Load Balancer, AWS CloudFront (CDN)
